

auto Mapper is object to object mapper

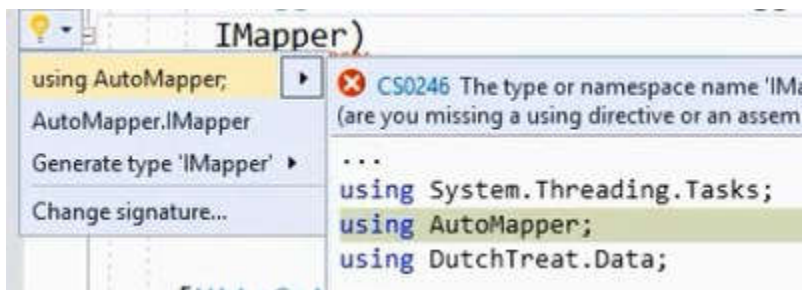

1 install from nuget packet manager

searching for profiles and register in di container

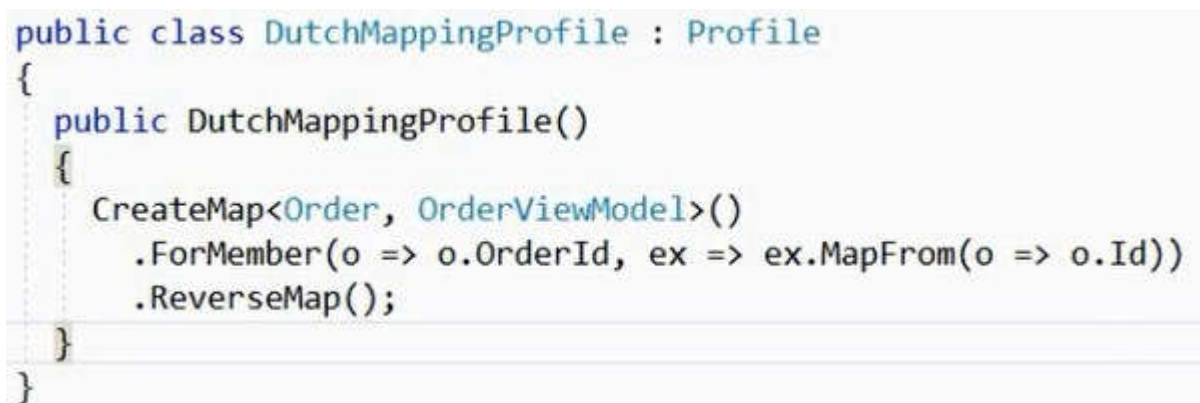

2.Get instance

3.Write Profiles to specify the mappings

profiles are added to configure mappings

Order ke se mapira vo OrederviewModel i ke se vrati OrederviewModel instanca

```
CreateMap<Entities.Author, Models.AuthorDto>();
```

```
CreateMap<Entities.Author, Models.AuthorDto>()  
    .ForMember(  
        dest => dest.Name,  
        opt => opt.MapFrom(src => $"{src.FirstName} {src.LastName}"))  
    .ForMember(  
        dest => dest.Age,  
        opt => opt.MapFrom(src => src.DateOfBirth.GetCurrentAge()));  
;
```

```
(_mapper.Map<IEnumerable<AuthorDto>>(authorsFromRepo));
```

object to get back
