

```
private adminSubject = new Subject<string>();
adminSubject$ = this.adminSubject.asObservable();

sendMessage(message: string): void
{
    this.adminSubject.next(message);
}
```

use it to send

```
this.sendMessage(this.status);
```

recive it

```
ngOnInit(): void {
    this.adminGuardService.adminSubject$.subscribe(message => {
        if ( message.toString() === '401')
        {
            console.log(message.toString())
            this.restError = 'Acess Denied';
        }
    });
}
```
